08/04/2015: No significant change observed.					
08/26/2014: No significant change observed.					
08/28/2013: No significant change observed.					
07/18/2012: No significant change observed.					
09/02/2011: No significant change observed.					
09/22/2010: No significant change observed. There is now considerable vegetation at the water line and along the lower berm slope. However, the erosion on the lower berm slope is still present and has not been corrected.					
08/06/2010: Recommended for local maintenance issue, per CLRO.					
07/29/2009: No major change since last visit; noticeable vegetation growth; erosion is on berm, but if left untreated, it will eventually erode into levee prism; site is recommended for annual assessment and monitoring of the site, per CLRO CES 2008 Report; Site # is the same as RM6.80,LM0.73; previously rated "U".					
07/22/2008: Downstream of WPRR near siphon pipe & pump; sandy levee; visited by Jeff Van Gilder and LRO in 2008 for repair assessment; scouring downstream of RR crossing, possibly caused by eddy effects.					
03/13/2007: Site visited on 03/13/2007. [2015 Site ID:RD2095U01RM6.74]

08/04/2015: No significant change observed. 7/02/2014: No significant change observed. 08/28/2013: No significant change observed. 09/13/2012: The site has been visited by land survey. The vegetation on the site shows the erosion has not developed significantly from the last survey. The site was not visited by boat survey due to the limitation of navigable waterway. 08/23/2011: No significant change observed. 9/22/2010: No significant change observed. There is moderate vegetation growth on the berm. Despite the erosion occurring on the berm, corrective action should be taken before the issue becomes severe. 9/29/2009: Site is immediately downstream of a section of existing rip rap; there is a 20-foot berm remaining; berm will continue to erode unless erosion is mitigated; Site# is the same as RM62.6, LM1.87; recommended for annual assessment, per CES Evaluation 2008 Report 2006: Visited 10/20/06 [2015 Site ID:RD2095U02RM60.62]

08/04/2015: No significant change observed.					
7/02/2014: No significant change observed.					
08/28/2013: No significant change observed. Dense vegetation blocks the visual inspection at the site.					
09/13/2012: The site has been visited by land survey. The erosion is not visible from the levee slope because of dense vegetation at the site. Levee slope is protected by placed rocks. The site was not visited by boat survey due to the limitation of navigable waterway.					
08/23/2011: Dense vegetation makes it difficult to view the possible erosion. No new development was observed on site.					
09/23/2010: At the time of the inspection, the erosion site was difficult to view from the levee. The erosion is located on the bank toe, below the existing rip rap. There were no signs of repair on site, nor has the site been reported to be repaired by the district. Images taken from last year indicate that existing rip rap at the bank toe has sloughed exposing the underlying soils. Weakening of the toe could lead to future bank instability.					
08/05/2010: Recommended for annual assessment and monitoring during flood events, per CLRO.					
09/29/2009: No major change observed since last visit; sloughing of the rip rap above toe; erosion begins immediately downstream of existing rip rap revetment; roughly 15-foot berm remains; however, it will continue to erode and eventually intrude into the levee profile if left untreated.					
10/20/2006: Just upstream of where berm starts to widen. [2015 Site ID:RD2095U02RM60.69]					

Photo 1 of 1 : SP_2016_RD2095_323_2_20160229_00004.jpg

The erosion is not visible from the levee top. The levee slope is protected by riprap rocks.
